Assignment 2: EDA

Dataset

https://www.kaggle.com/datasets/shivamb/netflix-shows

This dataset includes information on all Netflix movies and TV shows, including title, director, cast, country, date added, release year, rating, duration, and genre.

Tasks

1. Data Loading and Basic Checking

- Load the dataset into a DataFrame.
- Inspect the first 10 entries.
- Print dataset shape, column names, and data types.
- Check and report the total count of missing values per column.

2. Data Cleaning

- Handle missing values with appropriate methods (imputation or removal).
- Standardize casing for string columns like type and rating.
- Ensure date columns are converted to datetime format.

3. Univariate and Bivariate Analysis

- Identify the most common rating category.
- Calculate the distribution of content by country for the top 5 countries.
- Analyze content types (Movie vs TV Show) and their average release year distribution.

4. Trend and Relationship Exploration

- Use `groupby()` to identify how many titles were added to Netflix in each year.
- Determine if there is any noticeable trend in the number of titles added per year.
- Analyze the relationship between release year and rating type visually.

Made by recycled paper, because we care.

5. Visualizations

- Plot a count plot for type (Movies vs TV Shows).
- Plot a bar chart showing the top 5 countries by content count.
- Create a line chart showing yearly title additions.
- Plot a scatter plot of release year vs duration (converted to numeric if needed).
- Generate a heatmap of correlations between numeric features (if applicable).

6. Conclusion and Insights

- Summarize key findings about Netflix content trends.
- Recommend one actionable insight for Netflix content strategy based on data patterns.
